This profile is aimed at Infant, Junior, Primary, Secondary and Special schools.

The aim of the profile is to show in a clear and concise way, the breakdown of the school cohort by Income Deprivation Affecting Children Index (IDACI) data. IDACI data are a supplemenentary indicies of the Index of Multiple Deprivation. The Index of Multiple Deprivation is the official measure of relative deprivation for small areas in England. These areas are known as Lower Super Output Areas (LSOAs). The average number of households per LSOA is 650. IDACI data ranks every LSOA in England from 1 (most deprived area) to 33,755 (least deprived area). To help make sense of the data, 'deciles' are published. Deciles are calculated by ranking the LSOAs from most deprived to least deprived and dividing them into 10 equal groups.

Pupils are matched to IDACI data by their postcodes which are obtained via school census returns. Hence, these analyses are based on where pupils live and not where the school is situated.

Further information on the English indices of deprivation 2025 can be found on the Internet at
